### 3. SURFACE PREPARATION & ENVIRONMENTAL CONDITIONS DURING APPLICATION (CONTINUED)

#### ENVIRONMENT CONDITIONS

The temperature of the surface should be at least  $3^{\circ}$ C higher than the DewPoint of the air. Temperature and relative humidity should be measured in the vicinity of the substrate. The maximum recommended surface temperature is  $40^{\circ}$ C. In extreme cases, it may be necessary to reduce film thickness in order to avoid sagging. When applying the paint in confined spaces, provide adequate ventilation during application and drying. The temperature of the mixed paint should be at least  $15^{\circ}$ C. Otherwise extra solvent may be needed to obtain a proper application viscosity. Relative humidity must not be over %80

# 4. PACKING & STORAGE CONDITIONS

PACKING DETAILS	ISL Component A + 5L Component B in steel pails
STORAGE CONDITIONS	Storing areas should be dry and well ventilated where the temperature is always between 5-30°C. These areas should be seperated from the
	manufacturing fields to eliminate the risks of fire.
